

Physician	Dr. Emily Johnson	Test Location	Medix Healthcare Imaging Center
Exam Type	Chest X-ray	Indication	Evaluation of persistent cough

## Patient Demographics

Patient ID		Gender	
Patient Name		Date of Birth	

## Examination

A standard posteroanterior (PA) and lateral chest X-ray was performed.

## Findings

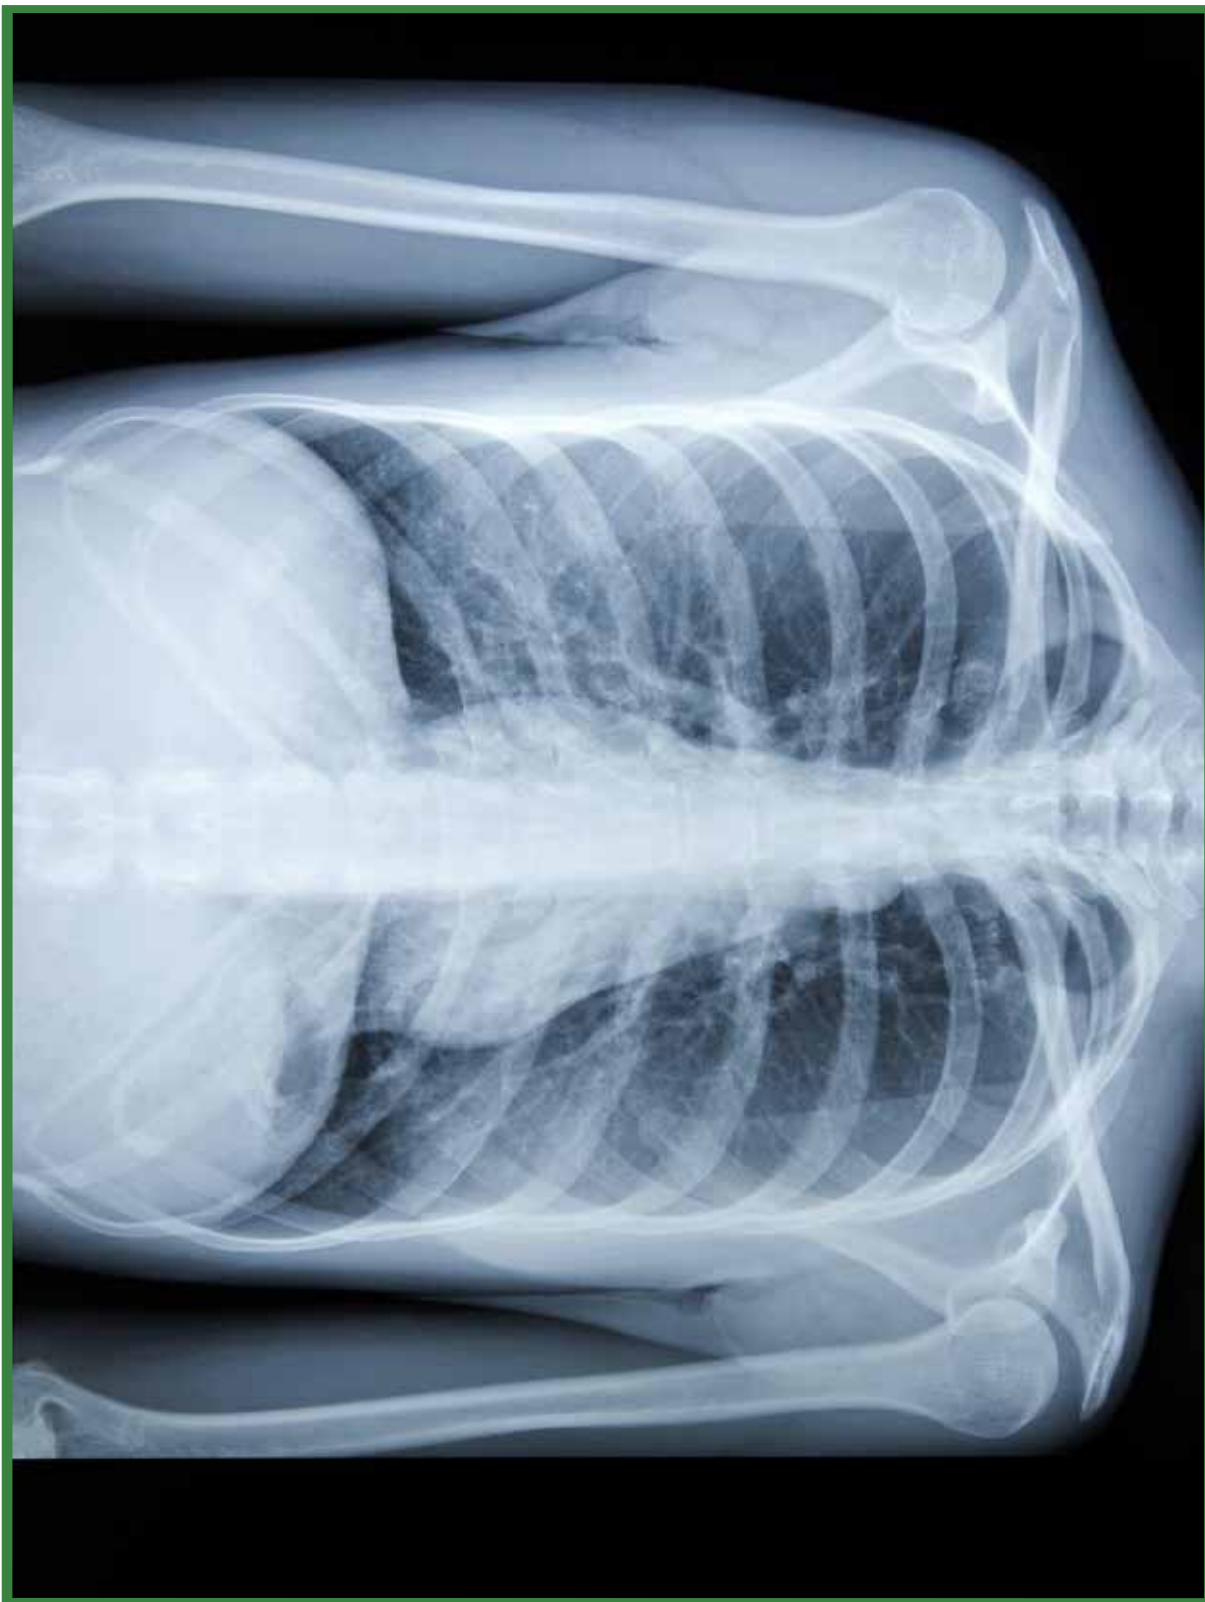

Lungs	Clear bilaterally, no evidence of consolidation, effusion, or pneumothorax.
Heart	Cardiomegaly is not noted. Heart size is within normal limits.
Mediastinum	No widening of the mediastinum.
Diaphragm	Diaphragms are intact and positioned normally.
Bones	No acute fractures or significant bone lesions.
Soft Tissues	No abnormal soft tissue masses observed.

## Impression

Normal chest X-ray.  
No acute pathology identified.

## Recommendations

- Clinical correlation is advised if symptoms persist.
- Consider further evaluation if cough continues, such as pulmonary function tests or CT chest if warranted.
